

# CUI CONTRACTUAL CONSIDERATIONS FOR INDUSTRY

VERSION 1.0

## TO SAFEGUARD CUI ACCORDING TO DOD CONTRACTUAL REQUIREMENTS

This document provides Industry with five essential considerations when safeguarding CUI while performing on DOD contracts. These considerations include:

1

### **Identify Person(s) Responsible for Implementing the Safeguarding and CUI Contractual Requirements. In addition, these individuals must:**

- Have a lawful government purpose and that is not otherwise restricted from accessing CUI.
- Complete initial CUI training, and annually thereafter.
- Ensure all personnel supporting contracts with CUI requirements complete mandatory CUI training in accordance with contractual requirements.
- Ensure resources are in place to adequately safeguard CUI and implement requirements.

2

### **Review and Identify Existing Contracts to Include Contracts Covered Under the NISP for CUI Requirements (i.e., DFARS clause 252.204-7012)**

- Review existing contracts and engage with Government customers to determine which, if any, CUI requirements are applicable to current contracts.
- Identify and inventory current legacy unclassified information and materials.

3

### **Comply with CUI Training**

- Ensure all authorized holders of CUI are familiar with the DOD CUI Registry categories and subcategories.
- Ensure all personnel supporting classified contracts with CUI requirements are aware of such requirements for marking, safeguarding, digital and physical storage, and dissemination.
- Administer initial CUI training to all authorized holders and CUI refresher training annually thereafter.
- Maintain all CUI training records.

4

### **Safeguard and Mark CUI**

- Establish and provide CUI handling procedures and adhere to CUI marking standards and guidance for all authorized holders of CUI.

5

### **Meet Supplier Performance Risk System (SPRS) Requirements**

- Upload contractually required information into SPRS.
- Maintain System Security Plan (SSP), Plan of Action and Milestones (POAM), and any other required information.
- Identify and document all challenges and vulnerabilities; and develop corrective actions to mitigate findings.
