

## OVERVIEW

The Defense Counterintelligence and Security Agency (DCSA) is launching the National Industrial Security System Increment II (NI2), a unified, data-driven platform engineered to transform the National Industrial Security Program (NISP) and modernize the Defense Industrial Base (DIB) information environment. NI2 modernizes current Industrial Security capabilities by automating complex workflows including DD Form 254s and SF-328s; enhancing Foreign Ownership, Control, or Influence (FOCI) risk mitigation; and delivering a streamlined, secure, and collaborative environment to support U.S. Government and Industry in empowering the defense ecosystem.

## KEY CAPABILITIES

- A single, unified cloud-based system for contract classification and FOCI risk mitigation.
- Single Sign-On (SSO) streamlined access, simplifies login procedures and improves user experience.
- Granular role-based access permissions ensure data security and appropriate information sharing based on user roles.
- Case management system to facilitate application, delivery, and oversight of facility clearances.
- Reporting features and capabilities, enabling data-driven decision-making and improved risk management.
- Automation of facility clearances and contract security specifications, enabling faster execution of classified contracts.

## BENEFITS

- **Enhanced Transparency:** Offers increased visibility into security information and processes for both Industry and Government stakeholders.
- **Reduced Redundancy:** Improves data accuracy and reduces administrative costs through elimination of redundant data entry and processes.
- **Enhanced Security Posture:** Strengthens the overall security posture of the NISP by providing a more comprehensive and integrated approach to industrial security management.
